

Press Release

## **InProcess Instruments presents French website**

**InProcess Instruments, the leading world-wide provider of highly-specialised quadrupole mass spectrometer systems, introduces its expanded Internet presence in French**

Bremen, September 2011.

With its revised Internet presence in German, English and now French, InProcess Instruments in Bremen is actively presenting itself as an internationally operating high-tech company.

A major aim of the launch of this French language website is to assist InProcess's strategic expansion into France, the Benelux countries and Switzerland. French speaking customers will now be able to access the French language domain on [www.in-process-instruments.fr](http://www.in-process-instruments.fr). The clearly laid out, user friendly menus enable quick access to information, and visitors to this website can also download PDF files of company brochures, publications and other material in French.

The new French website will be active in time for the 24<sup>th</sup> A3P International Conference for the Pharmaceutical and Biotechnology Industry in Biarritz, France, from 18<sup>th</sup> to 20<sup>th</sup> October 2011. InProcess Instruments GmbH will present its products and services with its business associate ARELCO-TECORA together on a shared stand. Delegates at the trade fair and conference will have the opportunity to learn about quadrupole mass spectrometers from InProcess's application specialist and to talk about their application to the production of pharmaceuticals.
